CATALYTIC CONVERTER THEFT

Catalytic converter theft happens on busy streets and in parking lots.

Protect your catalytic converter by following our advice.

Precious metals inside converters make them attractive to thieves. Make yours harder to steal:

- Contact your vehicle dealer about fitting an aftermarket product, approved by the manufacturer to prevent the converter from being removed.
- Consider etching the converter with a serial number to help police track it and reduce opportunities for thieves to sell it.
- Park your car in a locked garage or well-lit area as close to your home as possible.
- Consider installing a CCTV or webcam that you can monitor and install dusk to dawn lighting covering the area.

WATCH OUT FOR THIEVES:

- People carrying metal cutters, car jacks, or metal from an exhaust pipe
- People ducking underneath cars
- If you see suspicious behavior call 911 immediately
